

ANNOUNCEMENT - DECEMBER 2008

Fenix EDI Messaging Service Offerings now include

DIRECT CONNECT to CBSA

While other providers boast about their connectivity to Canada Border Services Agency (CBSA,) Fenix is proud to offer a **Direct Private Circuit to CBSA**. The basis of our communications solution is a combination of technologies designed to deliver the very best uptime and performance that the brokerage/importing community has available. We are one of only a handful of service providers employing the **Direct Connect dedicated private line** with CBSA.

What this means:- We have a **dedicated private circuit** that is directly linked to CBSA. We exchange electronic data including ACROSS, RNS, CADEX, CFIA and OGD messaging between the client's own computer and the respective government agencies, such as the CBSA, CFIA, NRCAN, TC and SITT.

Advantages:- Our direct connect link with customs is a full T1 line capable of moving massive amounts of data at lightning speed. By utilizing this technology along with the Customs Internet Gateway as a failsafe we can **guarantee 99.9% uptime**.

Our difference:- Installation and setup are seamless for our customers.
Our solution is secure, reliable and faster than all other offerings
